BOUNDLESS
BECAUSE LOCATION MATTERS

BOUNDLESS EXCHANGE FOR STATE AND LOCAL GOVERNMENT
No unknown costs, no restriction on the number of users, no surprises

As the accumulation of data and imagery continues to accelerate, agencies with limited resources are challenged to store and process data used to create, edit, and share maps. In the case of unforeseen events or emergencies, government entities can find themselves faced with the need to spend more money in order to provide wider access, often to the public, to important information.

Limited budgets and unknown costs simply aren't compatible.
With Exchange, Boundless offers a solution that enables state and local governments to create, publish, visualize, and share geospatial information across the organization, without concerns about spiraling costs tied to licenses and number of users. Provide the access you need, right when it's needed, with no costly roadblocks.

Move beyond the limitations associated with named- or tiered-user subscription models and eliminate the procurement hassles incurred by guesswork. Unlock the flexibility and scalability of a managed solution – Boundless handles the complexity so you can focus on critical operations.

This managed-service solution includes*:
- Boundless Exchange-as-a-Service – implemented, preconfigured, monitored, and maintained by Boundless under a service level agreement
- Up to 500GB imagery storage and 100GB database storage
- Pricing as low as $1,299/month
- Two months free
- Option for monthly or quarterly billing

Modern and designed for collaboration
Built on open-source technology, Boundless solutions are highly interoperable and designed to work in a modern IT environment. Organizations looking to engage in a total transformation of their IT environment – or simply to future-proof their systems for further modernizations later on – can leverage Boundless to create efficiencies now and over time.

Meeting the needs of everyday users
Boundless frees you from the limits imposed by traditional proprietary software. If the majority of users in your organization are not developers or GIS experts, they can still get the tools they need to create a map, query or print the map, and even perform updates or ground-truthing in the field.

Supporting critical tasks for cities, counties, and statewide
Entities within state and local government are charged with making decisions that directly affect residents and visitors. From statewide applications like public health and utilities to local obligations such as pothole repair and property taxation, geospatial data plays a daily role in providing services that residents need. Boundless makes it easier to share this data throughout the organization, enabling faster and more efficient decision-making processes.

Special pricing available for a limited time. Two months free includes first and last month of service with a 12-month subscription agreement. Other conditions, restrictions, and exclusions may also apply.
